Documents 1-6 above are cited in the international search report.

· · INTERNATIONAL PRELIMINARY EXAMINATION REPORT

International application No. PCT/JP 03/08763

Documents 2 and 3 disclose the feature of adding cellulose glycolic acid (document 2) or sodium hydrogen carbonate (document 3) to a capsule that contains an extract from a traditional Chinese medicine in order to improve the disintegration and elution properties thereof. In addition, documents 4 and 5 indicate capsules that comprise either one of these compounds. However, documents 1-6 do not disclose the feature of adding a mixture of the cellulose glycolic acid and the sodium hydrogen carbonate that are disclosed in documents 2 and 3 to a capsule that contains an extract from a traditional Chinese medicine in order to improve the disintegration and elution properties thereof, or the feature of significantly decreasing the disintegration period and increasing the elution rate of a capsule that contains an extract from a traditional Chinese medicine by further adding silicic anhydride to the abovementioned mixture, and these features are not considered to be obvious to a person skilled in the art.

Therefore, the inventions that are set forth in claims 1-7 are novel and involve an inventive step.

The inventions that are set forth in claims 1-7 exhibit industrial applicability.
